HIGHER LEARNING COMMISSION STATEMENT ON
STUDENT LEARNING, ASSESSMENT, AND ACCREDITATION (2007)

Among the public's many expectations of higher education, the most basic is that students will learn, and in particular that they will learn what they need to know to attain personal success and fulfill their public responsibilities in a global and diverse society. Student learning is central to all higher education organizations; therefore, these organizations define educational quality—one of their core purposes—by how well they achieve their declared mission relative to student learning. A focus on achieved student learning is critical not only to a higher education organization's ability to promote and improve curricular and co-curricular learning experiences and to provide evidence of the quality of educational experiences and programs, but also to fulfill the most basic public expectations and needs of higher education.

In October 1989, the Commission first posited that assessment of student learning is an essential component of every organization's effort to evaluate overall organizational effectiveness. In February 2003, The Higher Learning Commission adopted a newly revised position statement on assessment of student learning (see Section 3.4-2 of the Handbook of Accreditation, Third Edition) to reaffirm and strengthen this position. Through the Criteria for Accreditation and multiple Core Components, the Commission makes clear the centrality of student learning to effective higher education organizations and extends and deepens its commitment to and expectations for assessment. Indeed, the Commission asserts that assessment is more than a response to demands for accountability, more than a means for curricular improvement. Effective assessment is best understood as a strategy for understanding, confirming, and improving student learning.
